PV- we can talk about this tomorrow. I noted where CARC identified tumor types that were not identified in your studies. For the most part things match up but of course there are studies that you have that we didn't and vice versa. You will need to make the call on whether or not to add the additional tumor types- if they were not identified in the EU reports then maybe there is a reason they were not included. For the tumors observed in the studies you reviewed, the rationale for not considering them treatment related is similar to that of EPA. I'm available to tomorrow if you want to go over this .
